

Worldpay - Magento 2 Extension
User Documentation
Ver. 2.1.5 - Oct 2019

1. Change Log

Release Version	Date	Description
1.2.2	Oct 27, 2017	<ul style="list-style-type: none"> • Direct Method • Redirect Method • MOTO Method • Alternate Payment Methods • Client Side Encryption (CSE) • 3D Secure (3DS) • Tokenization • Saved Card • Order Notification • Merchant Profile Override • Custom Payment Pages • Order Cleanup • Risk Guardian Data
1.3.0	Mar 6, 2018	<ul style="list-style-type: none"> • Magento 2.2.2 Support • PHP 7.1 Support • 3DS Cookie Issue resolved • By Default 3DS enabled.
1.4.0	Mar 20, 2018	<ul style="list-style-type: none"> • Worldpay Instant Purchase • Worldpay Instant Purchase With 3DS Enabled • BugFix : Payment Method Title From Admin configuration • Configurable Payment Order Description
1.5.0	Jun 25, 2018	<ul style="list-style-type: none"> • Release phase 3 for Klarna
1.5.1	Jul 17, 2018	<ul style="list-style-type: none"> • Capture for Klarna resolved • Minor fixes
1.5.2	Aug 20, 2018	<ul style="list-style-type: none"> • Minor bug fixes
1.5.3	Oct 9, 2018	<ul style="list-style-type: none"> • Supporting Magento 2.2.5 • Klarna bug fixes • Magento EQP validation
1.5.4	Oct 10, 2018	<ul style="list-style-type: none"> • Magento package validation fixes • Missed payment method images fixes
1.5.5	Dec 18, 2018	<ul style="list-style-type: none"> • Auto Invoice generation issue in direct mode for Credit Card • Checkout blocker issue - if order contains virtual

		products / no shipping address <ul style="list-style-type: none"> • 3DS - empty saved card list issue • Other minor fixes
2.0	May 14, 2019	Features: <ul style="list-style-type: none"> • Google Pay • Payment request API for Chrome Browser (Chrome Pay) • Support Magento 2.3.0 • Cron job for updating order status for failed order's Bug Fixes: <ul style="list-style-type: none"> • Support for debit card listing in Checkout page from Saved card lists • Auto Invoice generation issue in P24 payment gateway • Google address conflict issue • Security issues • Js issue if CSE (Client Side Encryption) is disabled • Other minor issues
2.0.1	August 8, 2019	Features: <ul style="list-style-type: none"> • 3DS2 Support - Beta version
2.1.0	August 22, 2019	Features: <ul style="list-style-type: none"> • 3DS2 Support - Full version
2.1.1	September 13, 2019	Features: <ul style="list-style-type: none"> • IE 11 Support Bug Fixes: <ul style="list-style-type: none"> • Configuration settings issue for wallet • Month sorting issue in checkout Page • Other minor bugs
2.1.2	September 16, 2019	Bug fixes
2.1.3	September 19, 2019	Bug fixes
2.1.4	September 25, 2019	3DS2 Live support and Bug fixes
2.1.5	October 15, 2019	CSE library link changes

2. OVERVIEW

Magento is one of the leading Open Source ecommerce platforms in the market. Worldpay is a payment gateway provider that can be integrated with Magento to provide online payment service to end user.

To accept payment from customer using Worldpay payment gateway, Merchants, who are running Magento 2 based online store, would require a payment integration extension installed from Worldpay to integrate their Magento online store with Worldpay payment.

3. Prerequisites

Magento 2 or higher version application should be installed and configured properly.

4. Installation

Worldpay Extension is hosted at <https://github.com/Worldpay/Worldpay-Magento-CG>, To run below installation steps, access to repository is required.

Composer Based Installation

For installation of extension using composer, Please follow below steps:

1. Run below code from command prompt at Magento installation root directory
`composer config repositories.repo-name vcs
git@github.com:Worldpay/Worldpay-Magento2-CG.git
composer require sapient/module-worldpay`
2. Run Setup Upgrade
`php bin/magento setup:upgrade`
3. Run Compilation
`php bin/magento setup:di:compile`
4. Finally clear cache
`php bin/magento cache:clean`

Traditional Installation

For installation of extension using traditional non-composer way, Please follow below steps:

1. Download the extension zip file from
<https://github.com/Worldpay/Worldpay-Magento-CG>
2. Unzip the file in a temporary directory
3. Please cross check if there is any code folder under app folder path
Magento2Rootfolder/app
 - a. If exist please upload it to your code directory.
 - b. If there is no code folder please copy the extracted folder to
app/code/Sapient/Worldpay folder.
4. Disable the cache under System >> Cache Management
5. Enter the following at the command line: `php f bin/magento2 setup: upgrade`
6. Clear the cache from command line: `php f bin/magento2 cache:clean` Flush the cache
from command line: `php f bin/magento2 cache:flush`

5. Configuration

After successful installation of extension , Please go to below Menu path to configure it.

Stores->Configuration->Sales->Worldpay

Configuration

Clean Order with Status	Mutli-Select Order status selections. Selected Orders will be fetched by order cleanup cron for cancellation.
Cancellation Time per payment method	Time in hour.

6. Invoice & Refund

Worldpay Magento 2 plugin allows invoice and refund with real time data synchronization with Worldpay payment gateway from Magento order manager.

Invoice

If Auto Create Invoice is set to “Yes” in configuration, Invoice will be generated as soon as Worldpay authorize response is received by Magento. Upon invoice creation, Order will be moved to processing status.

If Auto Create Invoice is set to “No” in configuration, No invoice will be created until ‘Capture’ Order notification is received. Order will remain in pending status until capture notification.

On capture notification received by Magento, Invoice will be generated and order will be moved to processing status, regardless of Auto create invoice setting.

Refund

Merchant can initiate full or partial refund from Magento2 Order manager by creating credit memo for invoice generated orders.

If invoice is generated and transaction status of order is in ‘Captured’ State. Online refund option will be available in credit memo create interface of Magento.

On click of “Refund” button, Credit memo will be generated and refund request will be initiated to Worldpay.

7. Order Notification

Plugin needs order notification to be setup to work properly. Order notification are transaction status updates pushed by worldpay to Magento2 store.

To receive Order notification , Below Order notification url is to be set in Worldpay merchant profile :

<https://<brand url>/worldpay/notification/index>

Where transactions are processed Asynchronously you may notice a detail of the transaction details being presented within Magento Order Details. Shortly after Magento receives the notification from Worldpay it will update the details to reflect the content.

8. Customisations

Change Order Code Format

The order code is created by the plugin and must be unique. It is possible to change the Order Code format by following these steps:

- Order code format can be changed by editing
:sapient\module-worldpay\Model\PaymentMethods\AbstractMethod.php.
- In this file there is a function called `_generateOrderCode($quote)`.
- Currently the order code format is Magento reserved order id - current time (ex: 000001030-1515391128).

Error Code messaging

Error code message are added in code and It is possible to change them by adding magento default translation CSV functionality.

- To add translation csv file in magento2, add a folder named: "i18n" inside module's folder

Then create a csv file with name of language code.

for example:

for english (United state) => en_US.csv

french (canada)=>fr_CA.csv

- Inside csv file you just need to add words which you want to translate, in following manner: "<word in english language>","<word in language to convert>"

for example:

"Add New Template", "Ajouter un nouveau modèle"

"Transactional Emails", "Emails transactionnels"

Back, Arrière

Reset, Réinitialiser

How to add a new payment method

It is possible to add a new payment method by...

- First, need to update etc/config.xml file, add required payment method information.
- Update etc/paymentmethods.xml file and mention the country which new payment method supports.
- Update etc/adminhtml/system.xml file to add new payment method settings to display/accessible it for admin configuration part.
- Add the new payment method front end code to display it in payment methods section of checkout process.
- Create new payment method file in Model/PaymentMethods/ folder to call the payment functionalities (refer: CreditCards.php, Moto.php, AlternativePaymentMethods.php).
- Create a authorisation service file in Model/Authorisation/ folder based on payment method type.
- Authorisation service is responsible for collecting payment data, Worldpay payment request and handling Worldpay payment response.

How to display Images/Icons as the payment method

Payment method image/Icons are displayed according to the image stored in \sapient\module-worldpay\view\frontend\web\images\cc. to add/update icons need to paste the required icon/image file in this folder by naming it exactly as payment type code.

For example: to update Mastercard icon add image file and name it as "ecmc-ssl".

9. Reporting a bug

Please do this via github.

10. Instant Purchase

Instant Purchase feature is one click checkout button placed on product detail pages. On click of this button, Magento places order using the default shipping, billing address, and last stored payment method from logged in user. Once the order is placed, an order confirmation message appears in the notification area.

Worldpay extension for Magento 2 supports Instant purchase if logged in customer has a default billing, shipping and saved card.

Prerequisites To display Instant Purchase Button:

- Instant purchase enabled for a store at Store / Configurations / Sales / Sales / Instant Purchase
- Customer is logged in
- Customer has default shipping and billing address defined.
- Customer has valid stored Credit Card with Worldpay Payment.

How Instant Purchase Work with Worldpay

- Instant purchase works as a new payment method from backend called worldpay_cc_vault.
- config.xml contains new worldpay_cc_vault payment method and its title, payment_action, instant purchase availability, token formatter and additional information.
- Once customer place order with “Save This Card” option, Card details will be saved in Magento vault by Worldpay extension.
- After saving the card details in Vault, Customer session data loaded with saved card details for Instant Purchase.
- On product details page Instant Purchase Button displayed by checking the default shipping, billing address and cheapest shipping methods availability.
- On clicking of “Instant Purchase” button, Order is placed with Magento 2.2 Instant purchase module and uses Worldpay payment method (worldpay_cc_vault) as payment gateway.

Please note Instant Purchase Integration is not enabled by default. If the payment method meets all the requirements listed, you can enable Instant Purchase

Stores->Settings->configuration->Sales->sales->Instant Purchase.

Above setting Enable Instant purchase globally, for Worldpay module specific you need to enable from **Stores->Settings->configuration->Sales->Worldpay->Credit Cards->Enable Instant Purchase**.

Instant purchase with 3DS

Worldpay support for Instant purchase checkout even with 3ds is enabled for a card, It is possible by suppressing 3ds for only IPC transactions.

11. Google Pay - β (Beta Version)

Google Pay lets your customers pay with the press of a button — using payment methods saved to their Google Account.

How to Enable?

In admin, configurations are available to enable/disable this feature.

Admin → Stores → Configuration → Sales → Worldpay → Mobile Wallets

Here, enable the Google Pay option.

Mobile Wallets

Title [store view] Wallets

Google Pay

Enabled [store view] Yes

Payment Methods [store view]

- American Express
- Visa
- Discover
- Japanese Credit Bank
- Master Card

☐ Use system value

Below are the configuration needs to saved,

Merchant name: worldpay

Merchant Id: Merchant id that google will provide.

Auth Methods [store view]

Pan Only

Cryptogram 3ds

☐ Use system value

Merchant Name [store view]

MerchantId [store view]

You can find the option to change the environment i.e. *Test / Production* in the General Configuration Section.

General Configuration

Enable Worldpay [store view]

Environment Mode [store view]

Test URL [store view]

Live URL [store view]

How it will work?

You can see the Google Pay option in checkout page like below, once it is enabled,

Payment Method

☐ Check / Money order

☐ Credit Cards

☐ All APM

☒ Wallets

☒ Google Pay

☒ My billing and shipping address are the same

[Redacted]

[Redacted]

Newcity, Alaska 232323

United States

2323232

Place Order

Once you clicked the Place order button you can see the saved card details from Google account if you already signed in Google account. If not then, Google will ask to sign in.

If you don't have any saved card from your google account, then you have to enter debit / credit card details.

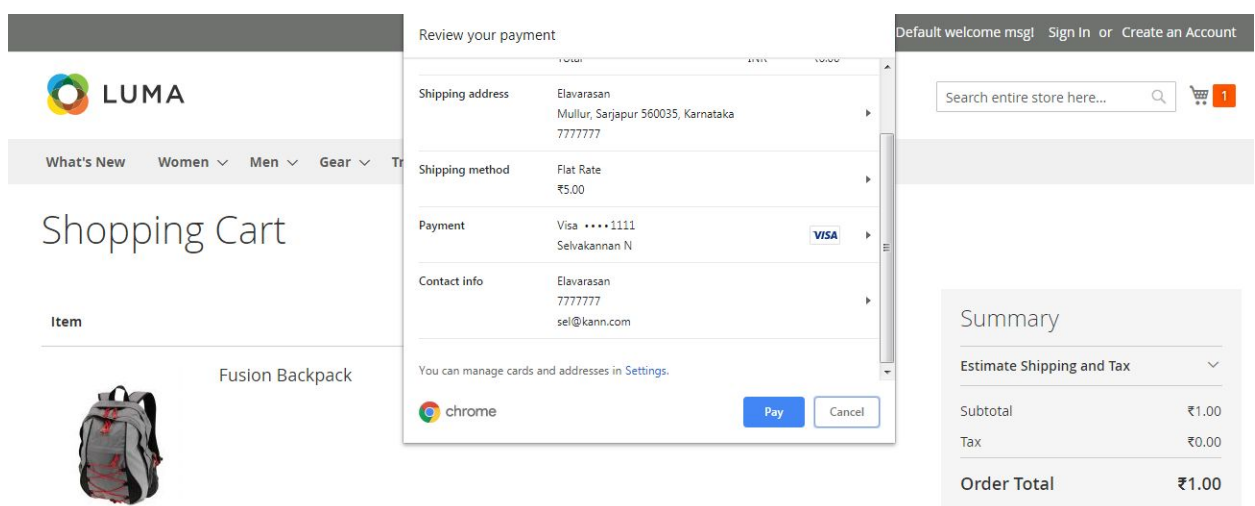

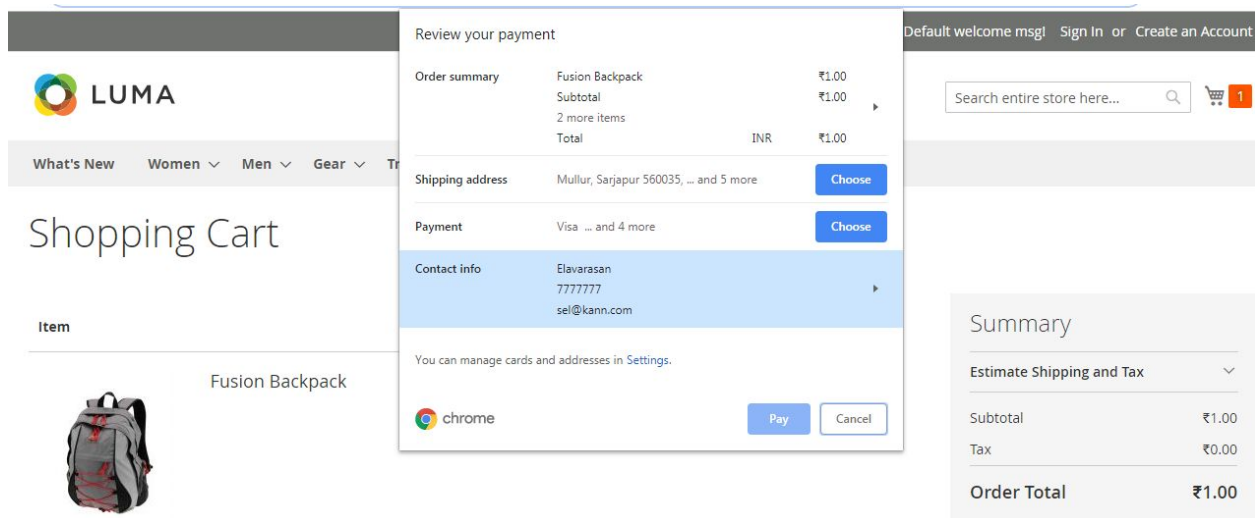

If the payment is approved by Google and Worldpay then success page will be showed up.

12. Payment Request Api for Chrome Browser (Chrome Pay)

The purpose of this feature is fast up the checkout process. It will collect saved data from the browser (only for Chrome now) and it will show in the checkout forms i.e. Shipping

and billing address, Saved debit / credit card details. Every actions will happen in one popup window. i.e. One-page checkout

How to Enable?

In admin, configurations are available to enable/disable this feature.

Admin → Stores → Configuration → Sales → Worldpay

Require CVC [store view] Yes

Integration Mode [store view] Direct

Hosted Payment page Integration [store view] Full page

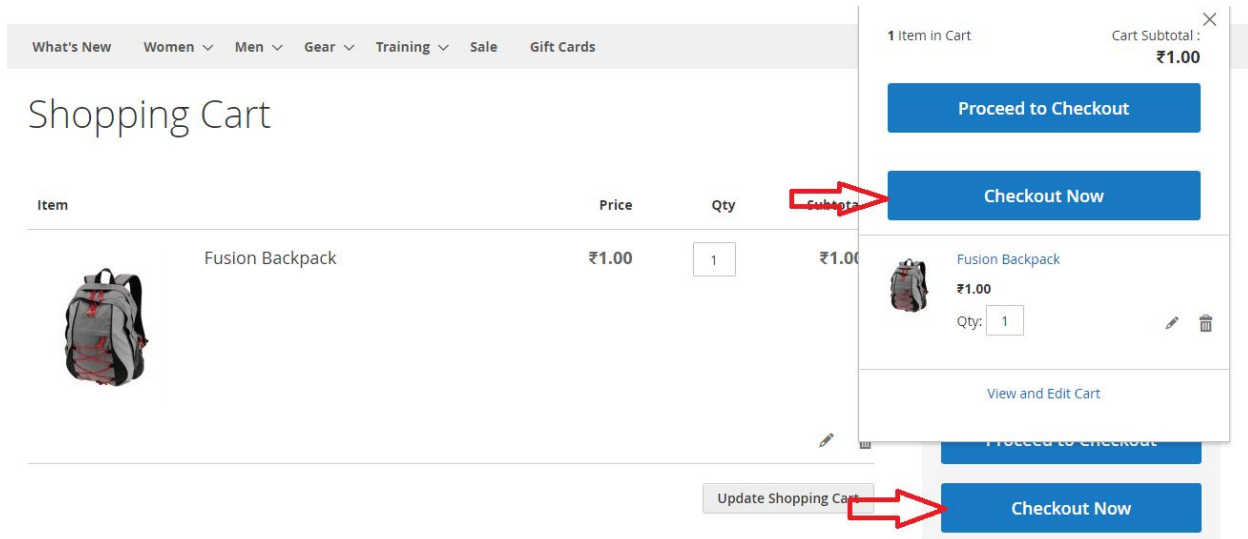

Save Card [store view] Yes

Enable Instant Purchase [store view] No

Enable Chrome Pay [store view] Yes

Chrome Pay Button Name [store view] Checkout Now

Enable the Chrome pay option in above path. Chrome pay will work on only with **Direct mode**. And the button name is configurable from admin. i.e. Checkout Now. Once it is enabled then the button will be available in mini-cart and cart page (Magento cache needs to be cleared)

That button will initiate the Chrome Pay functionality (the pop up).

13. Cron jobs

Some orders are not getting updated as expected in Magento admin **occasionally**. So setting up a cron will help to update those orders. It will take all orders i.e. Direct, Redirect, APM & MOTO which is placed from last 24 hrs. and will sync with Worldpay server. It will not take cancelled orders.

a. How to setup?

By default, Magento has lot of default cron groups. We can run all cron groups and we can able to run single group as well. To avoid run the all groups we have created separate group i.e. **worldpay_orders** to update worldpay orders.

Run the below command to execute the script to update the orders,

```
php bin/magento cron:run --group="worldpay_orders"
```

Once the execution is done you can see the results in the CLI screen.

```
magento@ip-172-31-28-8:/var/www/html/webroot$ php bin/magento cron:run --group="worldpay_orders"
Ran jobs by schedule.
magento@ip-172-31-28-8:/var/www/html/webroot$
```

% Total	% Received	% Xferd	Average Speed	Time	Time	Time	Current
100	2678	100	2355	100	323	2029	278
0:00:01	0:00:01	--:--:--	2030				
100	1636	100	1313	100	323	2035	500
--:--:--	--:--:--	--:--:--	--:--:--	2035			
100	929	100	465	100	464	752	750
--:--:--	--:--:--	--:--:--	--:--:--	751			

b. Configure cron in periodic time

To schedule this cron job in periodic time, you need to setup cron in your server. There are multiple ways to setup cron in server. Below is the one example.

Below is the command line to configure cron,

Crontab -e

Add the following lines to your cron file (add your php.ini file path inside)

```
*/1 * * * * php -c {php.ini_path} {magento_path}/bin/magento cron:run  
--group="worldpay_orders"
```

Above line will execute the script at every 1 min. You can adjust as per your requirement.

14. 3DS2 Configuration

3DS Flex is the most advanced product on the market for 3-D Secure (3DS). It combines the new standard of 3DS2 with traditional 3DS allowing for a single integration.

To make use of the benefits of 3DS Flex you must enable and configure 3DS2. This guide will provide steps on how to achieve this,

Login to Magento Admin → Stores → Configuration → Sales → Worldpay

Under General Configuration you can see 3DS2 configuration like below,

Enable Dynamic 3DS2 Secure Override <small>[store view]</small>	Yes ▼
JWT Event URL <small>[store view]</small>	https://secure-test.worldpay.com <small>For Live Use Cardinal Commerce URL, For Test Use https://secure-test.worldpay.com</small>
JWT Api key <small>[store view]</small>	██
JWT Issuer <small>[store view]</small>	████████████████████████████████████
Organisational Unit Id <small>[store view]</small>	████████████████████████████████
Test DDC URL <small>[store view]</small>	https://secure-test.worldpay.com/shopper/3ds/ddc.html
Production DDC URL <small>[store view]</small>	https://centinelapi.cardinalcommerce.com/V1/Cruise/Collect
Risk Data <small>[store view]</small>	Yes ▼
Authentication Method <small>[store view]</small>	ThirdParty Authentication ▼
Test Challenge URL <small>[store view]</small>	https://secure-test.worldpay.com/shopper/3ds/challenge.html
Production Challenge URL <small>[store view]</small>	https://centinelapi.cardinalcommerce.com/V2/Cruise/StepUp
Challenge Preference <small>[store view]</small>	Challenge Requested ▼
Challenge Window Size <small>[store view]</small>	Full Page ▼

The above image has the sample values for the required parameter to configure 3DS2 feature. Please clear the Magento cache once configuration is updated.

Detailed explanation for the above fields:

Enable Dynamic 3DS2 Secure Override:

This is to enable or disable the 3DS2 feature. If 3DS2 is disabled, order will be placed by 3DS (if 3DS is enabled). If both are disabled then order will be placed by normal credit card authentication.

Jwt Event URL:

It is for capturing the session id from domain. For **Production Mode** please use below value,
<https://centinelapi.cardinalcommerce.com>

For test mode please use below value,
<https://secure-test.worldpay.com>

JWT Api key, JWT Issuer, Organisational Unit Id:

You will get those values from Worldpay.

Test DDC (Device Data Collection) URL:

It is for creating JWT session id. Use below value for this field for test mode,
<https://secure-test.worldpay.com/shopper/3ds/ddc.html>

Production DDC URL:

Use below value for Production mode,
<https://centinelapi.cardinalcommerce.com/V1/Cruise/Collect>

Risk Data:

If this is enabled, the plugin will provide additional information to Worldpay to increase the chances that the shopper won't be challenged.

Authentication Method:

This is Optional for now (latter use).

Test Challenge URL:

This is the url for challenge page. Please use below value for test mode,
<https://secure-test.worldpay.com/shopper/3ds/challenge.html>

Production Challenge URL:

Please use below value for production mode,

<https://centinelapi.cardinalcommerce.com/V2/Cruise/StepUp>

Challenge Preference:

This is Optional for now (latter use).

Challenge Window Size:

This is Optional for now (latter use).

The above screen shot is having the entire configuration related to 3DS2. And please note that the 3DS2 feature will work only with **Direct mode** (you can see the mode configuration on the same page under Credit Cards section) below is the screenshot for your reference,

The screenshot displays three configuration options for 3DS2, each with a label, a value, and a dropdown arrow:

- Require CVC** [store view]: Yes
- Integration Mode** [store view]: Direct
- Hosted Payment page Integration** [store view]: Full page

The 'Integration Mode' dropdown is highlighted with a thick black border.

Below configuration, also always needs to be enabled for 3DS2, i.e. **Do 3D Secure authentication**.

XML Password [store view]	<input type="password" value="....."/>
Enable Dynamic 3D Secure Override [store view]	<input type="text" value="Yes"/>
Do 3D Secure authentication [store view]	<input type="text" value="Yes"/>
Enabled Logging [store view]	<input type="text" value="Yes"/>
Capture Invoice Automatically [store view]	<input type="text" value="Yes"/>

However if you disabled the 3DS1 i.e. **Enable Dynamic 3D Secure Override**, then **Do 3D Secure authentication** option will disappear (it will not be visible) but make sure that **Do 3D Secure authentication** option is enabled always.

My Account Saved Card (Exception):

Cards, which had been saved before 3DS2 version, please update the saved card from My Account section.

My Saved Card

Card Brand #	Card Number	Card Holder Name	Card Expiry Month	Card Expiry Year	
VISA	4111*****1111	██████████	4	2022	Update Delete
ECMC	5555*****4444	██████████████████	4	2022	Update Delete
